PROFILE

C++ and systems programming engineer with experience shipping production Android utilities and Windows tooling.

PROJECTS

1. PixelPull [Github](#)

- Architected and directed the build of an Android utility using an AI-assisted IDE (Antigravity) – defining the scheduling logic, image-fetch pipeline, and app structure, then iterating through prompt-driven development to working release.
- Achieved ~80% faster wallpaper setup versus general-purpose automation platforms (e.g., MacroDroid) by designing a constrained, single-purpose workflow instead of a general automation framework.
- Specified WorkManager-based scheduling to eliminate persistent background services and reduce idle resource consumption; set up automated APK builds and releases via GitHub Actions CI/CD.
- Designed to power dynamic visual content for a time-based productivity concept inspired by thelifecalendar.com.

2. Portfolio Website – HTML, CSS, JavaScript. [Site](#)

- Designed and built a responsive portfolio site to showcase projects, skills, and resume information, with clean UI layouts and client-side interactivity.
- Deployed the production site (chahalarsh.in) on GitHub Pages for zero-maintenance hosting, plus an experimental subdomain (exp.chahalarsh.in) on a self-hosted server for testing infrastructure changes independently.

3. Personal HomeLab Setup [Github](#)

- Deployed CasaOS on a self-hosted VM to manage containerized services through a unified dashboard, functioning as a personal cloud platform.
- Replaced services such as Google Photos with a self-hosted Immich instance for private media storage.
- Built a Telegram bot via n8n workflows integrated with hermes agent for real-time downtime alerts, automated system diagnostics, repair and on-the-go management.

4. Above – C++, Win32 API. [Github](#)

- Developed a **lightweight** Windows utility that pins any application window as “Always on Top” using a global hotkey
- Focused on minimal system overhead, achieving near-zero CPU usage during idle operation with a minimal memory footprint prioritizing performance and simplicity
- Added automatic startup registration on first launch for improved user convenience

OPEN SOURCE CONTRIBUTIONS

- **Distrodle** – Fixed a spoiler bug in an open source Linux distro quiz game Distrodle caused by a leftover debug artifact that leaked the answer to the client before any user interaction leading to unfair play. [PR Link](#)

TECHNICAL SKILLS

- Programming Languages: **C/C++, JavaScript, Python**
- Web Technologies: **HTML, CSS**
- Frameworks: **React.js, Three.js**
- Tools & Platforms: **Git, GitHub, Antigravity, Linux, n8n, GitLab, Docker, Hermes Agent**

TECHNICAL ACTIVITY

- Solved **300+** Data Structures and Algorithms problems on LeetCode
- Maintained **80+** GitHub commits across personal and academic projects

EDUCATION

B.Tech CSE, Bhai Gurdas Institute of Engineering and Technology, **2024– Present (Expected – 2028)**
